Module code	M_WE_SEM10 PW 1H/2H CHIR SZCZ
Field of study	Veterinary medicine
Module name, also the name in	Maxillofacial Surgery
English	Chirurgia szczękowa
Language of instruction	English
Module type	elective
Level of studies	Long-cycle master's degree studies
Form of study	Full-time
Year of study in the field of study	V
Semester of study in the field of	X
study	
ECTS credits, divided into	1 (0,67/0,33)
contact/non-contact hours	
Academic title/degree, name of the	Prof. dr hab. Izabela Polkowska
person responsible for the module	
Unit teaching the module	Clinic of Animal Surgery, Faculty of Veterinary Medicine,
Module objective	Learning the basic procedures of maxillofacial surgery, principles of temporomandibular joint disease diagnosis and maxillofacial surgery, basics of treatment of maxillofacial malocclusion in small animals, selected models of animal orthodontic appliances and dental implants. Learning the basics of plastic surgery with facial soft tissue reconstruction and dental procedures in laboratory animals. Principles of oral examination including classification of maxillofacial disorders. Fractures of the maxilla and mandible, diagnosis, methods of stabilization. Surgical treatment of maxillofacial malformations using treatment steps. Preoperative management in orthodontics, principles of bite correction planning. Dental prothetics in small animals. Reconstructive dentistry using biomaterials.
The learning outcomes for the module include a description of the knowledge, skills and social competences that the student will	Knowledge: K1. Has basic knowledge on diagnosis, principles and methods of malocclusion treatment in small animals and surgical treatment of diseases of the mandible, maxilla and temporomandibular joint
gain after completing the module.	Skills:
	S1. Has the ability to evaluate and apply the selection of appropriate treatment for malocclusion in small animals and diseases of the mandible, maxilla and temporomandibular joint .
	Competences:
	C1. Understands the need for learning and self-improvement of
	specialist knowledge in oral surgery in connection with the
	continuous dynamic development of methods of diagnosis and
	treatment of diseases in dentistry and surgery
	C2. Deals appropriately and knowledgeably with patients during
	examination, preparation and during oral surgery procedures.
Prerequisites and additional requirements	According to the sequence of subjects

techniques using regenerative medicine. 7. Management of maxillary fractures, advanced treatment techniques using regenerative medicine. 8. Fractures and dislocations of teeth. 9. Treatment of oro-nasal fistulas. 10. Correction of the palate and nasal wings. 11. Preoperative management in orthodontics, principles of bite correction planning. 12. Taking impressions in orthodontic treatment. 13. Treatment of fractured dental crowns with dental prosthetics. 14. Reconstructive dentistry using biomaterials. 15. Implantology in veterinary medicine. 16. C. Tutt "Stomatology of small animals" Elsevier 21.0. Andreasen, L.K. Bakland, M.T. Flores "Postaccidental damage to teeths" Elsevier 3. Frank J.M. Verstraete, M.J. Lommer "Oral and Maxillofacial Surger In Dogs and Cats." Elsevier 2012 4. Cecilia Gorrel "Stomatology" Elsevier Planned forms/activities/teaching methods 17. Practical presentation of surgical treatment of oral diseases in small animals. 2. Practical monitoring of the course of orthodontic treatment. 3. Practical endodontic treatment 4. Practical endodontic treatment 5. Practical endodontic treatment 6. Practical endodontic treatment 7. The course is conducted in the form of lectures and exercises. The student independently performs the preparation of acrylic masses and makes maxillary impressions.
