Technical University of Moldova /
Faculty of Energetics and Electrical
Engineering

Lublin, 2024

From December 2, 2024 - December 6, 2024 I had the great opportunity to come on an academic mobility to the beautiful city of Lublin, Poland to carry out teaching activities at the University of Life Sciences, Faculty of Production Engineering from Lublin.

I want to express my gratitude to Mrs. Wolska Izabela from the ERASMUS Office of the University of Life Sciences for hospitality, organizational efforts, and useful advice.

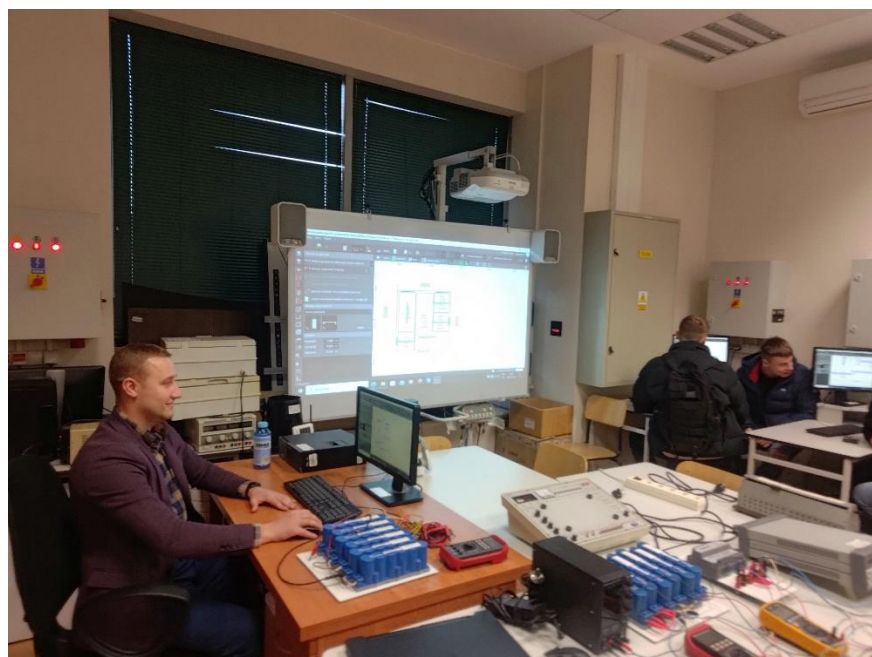

In addition to the above, I would like to express my sincere thanks for the accommodation in the Eskulap hostel, which provided me with all the necessary conditions during my mobility, including a kitchenette.

During the first day of mobility, after visiting the Erasmus Office, I went to Production Engineering and met Mr. Professor Dr. Jacek Kapica and Mr. Dr. Ścibisz Marek, and I am very thankful to them for the entire support they offered me during the whole mobility period.

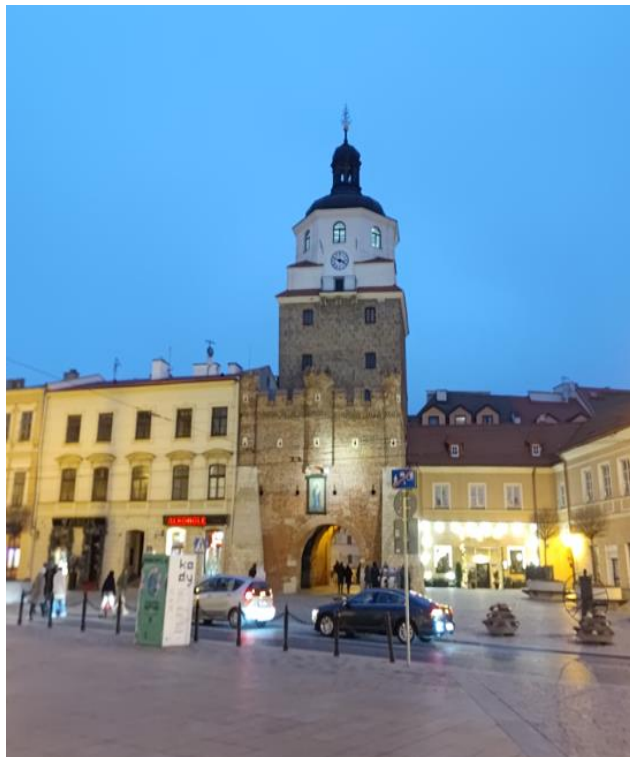

I had teaching activities with wonderful students from Bachelor and Master Degrees. The subjects I have presented were "Design, calculation, and visualization of indoor and outdoor artificial lighting systems. Theoretical and Practical Part," as well as "Renewable sources of energy. Current status. System integration and network development: studies, assessments, and evaluations." Here I also want to mention the great attitude of students, their desire to know more information about the subjects I presented, and their good abilities. Even if the subjects were sometimes too technical, the students kept their attention and tried to understand as much as they could.

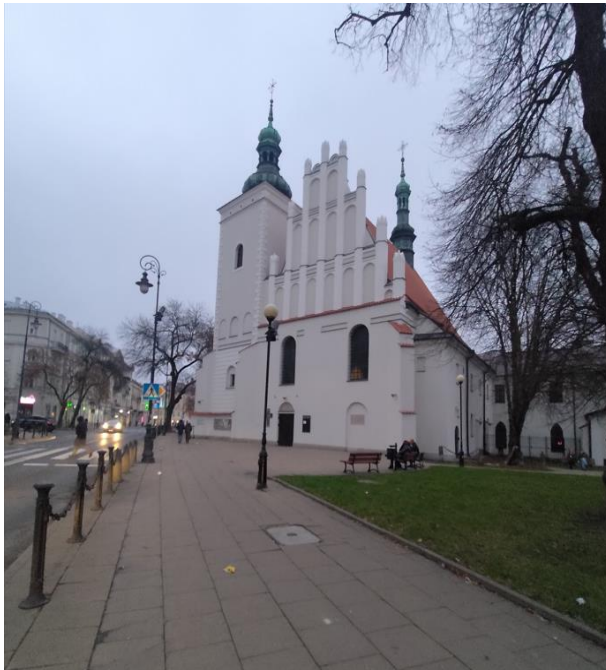

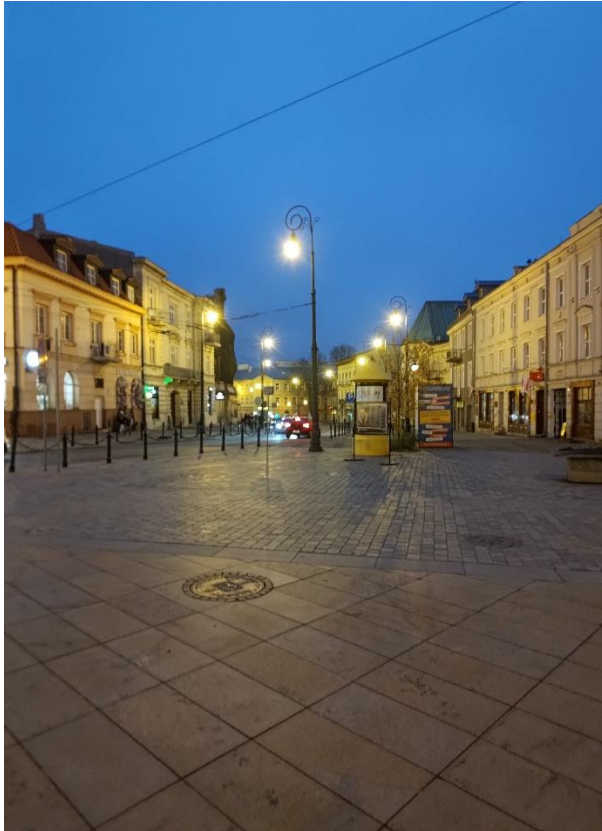

In addition to the teaching activities in our free time, I enjoyed the extremely beautiful architecture of Lublin. This city really is a City of Inspiration because many buildings have a history full of unrivaled energy.

At the same time, Lublin is a city in which buildings of different architectural styles have been preserved, which had and still have a tangent with some religions. I got great pleasure from every walk past these valuable buildings.

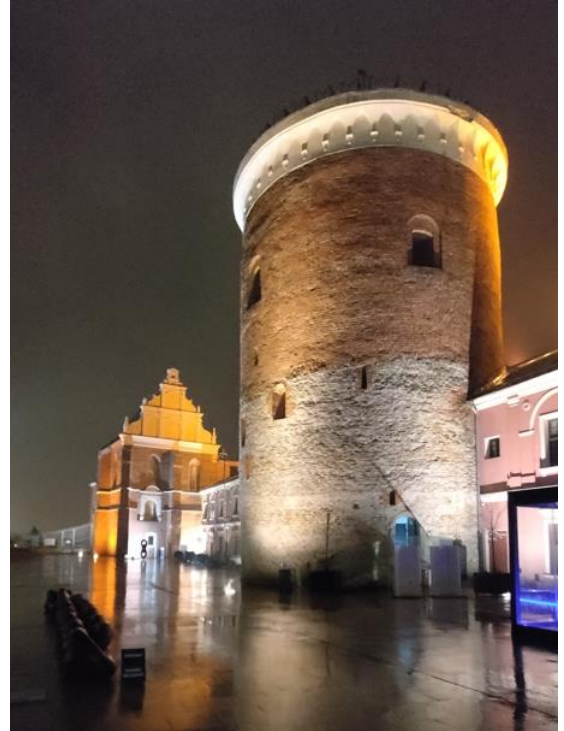

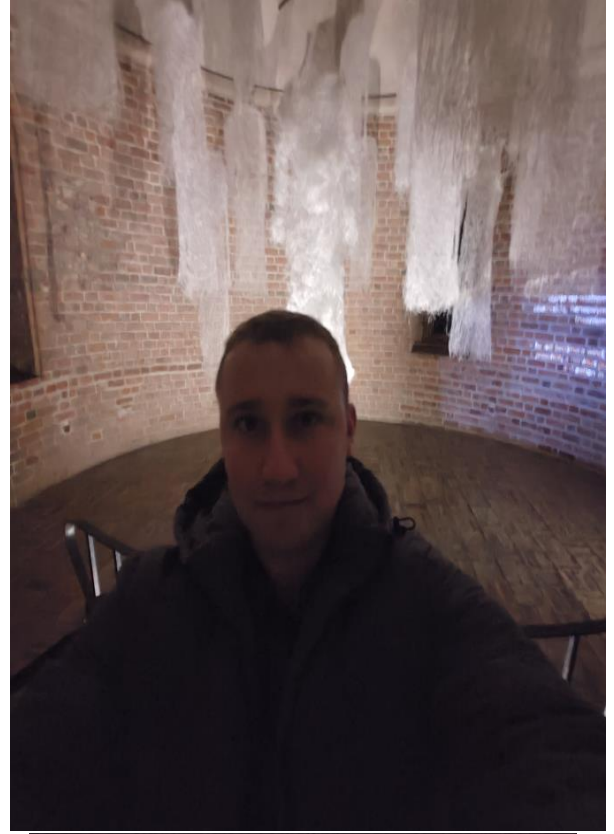

But the most beautiful, in my opinion, as a lecturer who teaches lighting systems design, I can say that the most beautiful is Lublin at night because of the street and architectural lighting that highlights and even amplifies the beauty and nobility of each building.

But, the King's Jewel in this treasure, the Arkenstone, I think is the castle which includes the Museum with a lot of precious piece of arts, the Tower from which we can watch upon the entire city and the Church.

Also I am very grateful to Mr. Professor Dr. Jacek Kapica and Mr. Dr. Ścibisz Marek for the trip to Kozłówka Palace – a very beautiful set of buildings with a great history for this region and for the entire country of Poland.

In conclusion, I would like to sincerely thank all the people involved in organizing the mobility I took part in and the beautiful city of Lublin for all the beautiful sights and all the kind-hearted people I met.
